Step-Father's Name	Maiso Mumbe
Step-Father's Profession	Cobbler
Primary School	Justin Kabwe Primary School
Secondary School	Chalo Trust School
2018 Grade Level	Grade 8

Emmanuel's Family

Emmanuel lives with his mother, step-father, two brothers and two sisters in Chipata compound. Though his mother, Josephine, only completed school up until Grade 7, she understands the importance of education and is committed to seeing Emmanuel finish his secondary education. In order to support the family, she sells children's clothes, mostly shorts, which she has made from donated fabrics. Emmanuel's step-father isn't always active in Emmanuel's life, but sometimes supplements the family's income with what he makes as a cobbler. Emmanuel's two elder brothers have finished Grade 12 and Grade 7, respectively, and each are currently employed in small jobs that they acquire on a day-to-day basis. His two younger sisters are enrolled in primary school. Now that Emmanuel has received the scholarship, the money saved in the household will support the sisters' secondary education.

Emmanuel's Educational Background

Emmanuel attended primary school at Justin Kabwe Primary, always passing in the first position in his class. He was a senior prefect, helping to supervise his fellow pupils and monitor their uniforms. Reinforcing his impressive academic record at school, he tied with another 2017 KF recruit to earn the top position in the KF recruitment exams. During these exams, he made a huge impression on many of the other students, as almost all of the

KUCETEKELA FOUNDATION

students cited him as impressive when asked about the exam day in their home interviews. Emmanuel's favorite subjects in primary school were mathematics and science, because he sees the connections that they have to the career he one day hopes to pursue as a doctor. In addition, he enjoys the particular types of problems that both subjects require him to solve. Emmanuel will attend secondary school at Chalo Trust School.

Emmanuel's Extracurricular Interests

When not in class, Emmanuel enjoys debating and practicing his public speaking. He also helps to teach Sunday school at his church to some of the younger students. He sets a good example in his spiritual life by participating in church programs, including singing in the choir. In addition, Emmanuel is a member of the Child Protection under Child Fund and mathematics clubs at his primary school. He participates in quiz competitions for the Child Protection under the Child Fund club, which is another opportunity he takes to work on his public speaking skills.

Emmanuel's Thoughts

Emmanuel particularly impressed the KF staff in his initial group interview. It was clear that even then, he understood the opportunity in front of him and quickly proved his knowledge on various topics. His explanation of copper mining and refining in Zambia was at a depth unparalleled to any of the other students in any of the group interviews.

When Emmanuel finishes school, he'd like to study medicine in university in order to become a doctor. This is because he has a desire to help others, and he feels that his skills in mathematics and science will make him successful in that career path. In addition, some of the major problems that Emmanuel has identified in his community include access to clean water and cholera. If he is able to become a doctor, Emmanuel has a particular interest in treating infectious diseases spread through contact with unclean water.
